

1. Dashboard Testing & Validation Report

1.1 Project & Environment Details

- **Project Name:** MedTrack DV (Hospital Operations & Patient Analytics Dashboard)
- **Environment:** Tableau Public / Tableau Desktop
- **Target Dashboards:**
 - a. Hospital Overview
 - b. Patient Flow
 - c. Department Analytics
 - d. Resource Utilization
- **Data Sources:** Cleaned Hospital & Patient Admission Records
(`hospital_cleaned.csv`)

1.2 Key Findings & Validation Summary

1. **Metric Accuracy & Calculated Fields:** All calculated fields—including Bed Occupancy %, Equipment Utilization %, Total Active Staff, and Department Efficiency Scores—were cross-verified against baseline Python calculations. Accuracy achieved: **100%**.
2. **Interactivity & Action Filters:** Global date range sliders, department dropdowns, and hospital region selectors update all corresponding charts instantly without lag or broken broken queries.
3. **Reset Filters Extension Integration:** The extension button was successfully deployed and tested across all 4 dashboard views, confirming 100% reset reliability upon user interaction.
4. **UI/UX & Branding Compliance:** Custom visual stickers, glowing cyan accents (`#00F2FE`), amber indicators (`#F59E0B`), and typography hierarchy conform strictly to executive presentation standards.

1.3 Deployment Approval

- **Status:** APPROVED FOR DEPLOYMENT
- **Verification Outcome:** All critical and non-critical QA checklist items passed. The workbook is portfolio-ready for deployment on GitHub and Tableau Public.
