

MedTrack DV - Quality Assurance (QA) Checklist & Testing Report

Executive Summary

This document serves as the formal Quality Assurance (QA) Checklist and Dashboard Testing Report for the **MedTrack DV: Hospital Operations & Patient Analytics Dashboard Suite**. The primary objective of this evaluation is to validate KPI accuracy, interactivity, layout visual appeal, dark theme styling consistency, and cross-dashboard navigation before final portfolio deployment.

1. QA Checklist Matrix

Module / Category	Test Item	Expected Result	Pass/Fail	Remarks / Observations
KPI Accuracy ▾	Bed Occupancy Rate	Calculated values strictly match underlying raw totals (>95% accuracy requirement)	PASS ▾	Evaluated across all departments; zero deviation detected.
KPI Accuracy ▾	Total Active Staff & Equipment Util %	Values auto-update dynamically based on filters	PASS ▾	Dynamic recalculation verified across hospital units.
KPI Accuracy ▾	Avg Patient Wait Time	Wait time metrics displayed accurately in hours without null values	PASS ▾	Verified average formulas in Tableau.
Filters & Controls ▾	Global Filters (Hospital, Dept, Date)	Filter selections apply globally across targeted dashboard worksheets	PASS ▾	Inter-dashboard filter scoping functioning properly.
Filters & Controls ▾	Reset Filter Extension	Clicking 'Reset Filters' clears active selections back to default state	PASS ▾	Extension configured and synced across all 4 dashboards.
Visual Formatting ▾	Executive Dark Theme	Uniform application of dark theme #0F172A background and #1E293B cards	PASS ▾	Aesthetic styling perfectly aligned with executive suite design.

Module / Category	Test Item	Expected Result	Pass/Fail	Remarks / Observations
Visual Formatting	Card Alignment & Typography	KPI titles, numbers, and badges centered without text clipping	PASS	Fixed text frame alignments and centered number labels.
Navigation & Flow	Inter-Dashboard Navigation	Tabs and buttons smoothly transition between all 4 core dashboards	PASS	Seamless tab navigation verified across Hospital Overview, Patient Flow, Department Analytics, and Resource Utilization.
Data Integrity	Null/Blank Handling	Cleaned dataset leaves no #Error, missing, or unassigned records	PASS	Data pre-processing ensured <2% missing values requirement.
